

FOODS THAT HAVE EATEN MORE OFTEN DURING COVID19 PANDEMIC

Agenda

- Introduction
- Problem statement and data source
- Objective & Methodology
- Solution and description
- Impact

Introduction

This is a food survey conducted among some random people to know the most common food eaten during this COVID 19 pandemic.

From this survey we could get some valuable information like people in this pandemic are they becoming more health conscious and shifting towards healthy foods and find out some new recipes .

Problem statement and data source

To know the people choice food in this pandemic and new health options of the people and use the insights to add some new things in menu after the pandemic .

Data is collected from some random people from social media and some of my friends .

Objective & Methodology

- To increase the sales of the restaurant after pandemic .
- To know the peoples choice food in pandemic .
- To know the new recipes of food .

Solution Description

- Analysing data based on various foods
- Analysing data and getting the most often eaten food during pandemic
- The most often eaten food is Chicken and its recipes like chicken biryani
- There are some people who are vegans
- The people also eat rice and roti as common foods
- Some people are also interested in fast foods
- Some other people eat eggs and mutton as their next protein option after chicken
- Getting new trends in foods like salads , healthy foods , home food , Dry fruits and fruits

Visualization

Food survey conducted among 250 people
